ORIGIN AND BREEDING HISTORY OF A4922

1988	Cross was made in Queenstown, MD Parentage: A4715 * A3935
1988-89	F1 and F2 generation grown near Isabela, Puerto Rico and advanced using modified pedigree selection.
1989	F3 bulk population was grown at Queenstown, MD. Single plants were pulled and individually threshed.
1990	F4 progeny rows were grown in Queenstown, MD. Progeny row EP88326 Q90-1255 was selected based on agronomic characteristics.
1991	Line was tested as entry 16 in a three location preliminary yield trial.
1992	The F3 derived line was advanced to a 14 location yield trial where it ranked first of 30 entries. Sixty F5 plants were pulled and sent for short row increase in Isabela, Puerto Rico to produce breeder seed.
1993	Line was advanced to 3 yield trials, at a total of 27 locations. A Maintenance Test of 56 lines was grown for breeder seed production.
1994	Line was advanced and tested in 9 yield trials, which had between 4 and 14 locations per trial. A4922 is uniform and stable within commercially acceptable limits based on trial observations since 1991. As with other soybean varieties, variants can occur for almost any characteristic during the course of repeated sexual reproduction.
